WHAT IS AN API?

API = Application Programming Interface. In simple terms, a waiter.

You = the app
the customer

Kitchen = the server
where data and work live

Waiter = the API: carries your **request** to the kitchen and brings the **response** back. You never walk into the kitchen.

REQUEST → RESPONSE

```
GET https://api.github.com/users/octocat

→ 200 OK
{ "login": "octocat", "public_repos": 8 }
```

COMMON METHODS

Method	Does	Example
GET	Read data	Load your feed
POST	Create data	Place an order
PUT / PATCH	Update data	Edit profile
DELETE	Remove data	Delete a post

REAL EXAMPLES

- Zomato tells the restaurant your order
- Weather app asks a weather server
- UPI apps talk to your bank
- Google Maps inside other apps

TRY IT YOURSELF

```
// Paste in your browser console (F12 → Console)
fetch("https://api.github.com/users/octocat")
  .then(r ⇒ r.json())
  .then(console.log)
```
