WHAT IS DOCKER?

Package your app with everything it needs, so it runs the same everywhere.

The problem: "it works on my machine". Docker fixes it by shipping the app **with** its environment, like a lunchbox with everything inside.

IMAGE VS CONTAINER

Term	Meaning
Image	A read-only recipe/package: code, runtime, libraries
Container	A running copy of an image
Dockerfile	The text file that describes how to build the image
Docker Hub	A place to find and share images

A SIMPLE DOCKERFILE

```
FROM node:20
WORKDIR /app
COPY . .
RUN npm install
CMD ["node", "index.js"]
```

BUILD AND RUN

```
docker build -t myapp .
docker run -p 3000:3000 myapp
```

CONTAINER VS VIRTUAL MACHINE

Containers share the host's operating system kernel, so they are lighter and start faster than full virtual machines.
